SUBJECTS OF PUBLIC ADMINISTRATION IN COMMUNICATION SPHERE IN UKRAINE

In the paper, on the basis of the analysis of the current legislation of Ukraine, the issue of determination of the main subjects of public administration in the sphere of communication in Ukraine is considered. It is emphasized that the pressing question nowadays is to create an effective information and telecommunication infrastructure as one of the main factors for maximizing consumer demand for telecommunication services, as well as to create favorable organizational and economic conditions for attracting investments, to increase services and improve their quality, development. and modernization of communication networks.

It is noted that today there are a large number of public administration entities in the sphere of communications in Ukraine, which eventually leads to some negative factors that hinder the development of the mentioned sphere due to the duplication of powers of such entities and require elimination. The author draws attention to the lack of a single well-defined system of public administration entities in the sphere of communications in Ukraine and tries to classify the specified entities of a single clearly defined system of public administration entities in the sphere of communications in Ukraine: 1) the state as a subject of power represented by separate public administration bodies in the sphere of communication, which can be divided into subjects: a) general competence (President of Ukraine, Verkhovna Rada of Ukraine, the Cabinet of Ministers of Ukraine, Ministry of Infrastructure of Ukraine, National Police of Ukraine, local state administrations and local governments); b) special competence (Administration of the State Service for Special Communication and Information Protection of Ukraine, National Commission for State Regulation in

the Sphere of Communication and Informatization, Ukrainian State Center for Radio Frequencies, National Council of Ukraine for Television and Radio Broadcasting, Joint-Stock Company «UkrPoshta»); 2) telecommunication operators and providers, as well as other specialized entities for which the relevant activity is the main activity (for example, the owner of telecommunication cable ducts and / or telecommunication equipment providers; 3) consumers of services in the field of communication, the main activity of which is not related to this field.

Keywords: communication, telecommunications, public administration, entities, radio frequency resource.
