## **CONCEPT AND NATURE OF THE ADMINISTRATIVE LEGAL ENTITIES OF THE PROTECTION OF ENVIRONMENT**

Paper is devoted to the theoretical study of the issues of definition of the concept and essence of an interaction between the subjects of administrative and legal protection of the environment in Ukraine. It is emphasized that the current state of environmental protection in Ukraine in recent years has been worsened: environmental pollution by various wastes of both industrial and domestic character, reduced the quality of food and drinking water, polluted atmospheric air, etc. – it is not a complete list of negative factors that are happening not only in our country, but all over the world as well. It is noted that the modern system of environmental protection should be based on the interaction of public authorities, local self-government bodies, as well as public entities; it requires the improvement of legal framework and studying of an international experience in environmental problems solving.

It is noted that the specific social system of state and legal nature that performs the functions of environmental protection of Ukraine are the bodies of the environmental protection system of Ukraine (for example, Ministry of Energy and Environmental Protection of Ukraine, State Ecological Inspectorate of Ukraine, State Agency of Water Resources of Ukraine, State Agency of Forest Resources of Ukraine and others). It is noted that the interaction is an integral factor in the integration of administrative and environmental protection bodies into a single holistic system. Thus, an interaction implies the dynamism of the interacting entities and the system as a whole. It is concluded that the interaction of the subjects of administrative and

legal protection of the environment in Ukraine is an agreed on place, time and nature complex of certain measures, which provides timely exchange of information between the relevant entities, simultaneous implementation of planned activities, responsibility and mutual control, implemented to ensure environmental protection (ecological safety) and to prevent harmful effects on the environment.

**Keywords:** surrounding medium, environment, ecological safety, natural environment, wildlife.
