THE EFFECTIVENESS OF USE OF THE CALIFORNIAN PSYCHOLOGICAL QUESTIONNAIRE IN THE WORK WITH THE NATIONAL POLICE OF UKRAINE PERSONNEL

The article is devoted to the issue of Ukrainian-language adaptation of the psychodiagnostic methodology "California Psychological Questionnaire" (SPI) in the framework of improving the system of psychological support for working with staff of the Ministry of Internal Affairs of Ukraine. Ukrainian-language versions of this questionnaire have not yet been developed in our country, although its diagnostic potential is significant and can be used in state law enforcement agencies. Patrol and criminal police, district inspectors). The article provides the Ukrainian text of the questionnaire (SRI-U) and the keys to it. The main scales of SRI-U, of which there are twenty, are grouped into four categories – a) relationships with others – indicates the degree of balance, self-confidence, b) self-management – shows adaptability, maturity, social responsibility; c) motivation – determines the ability to self-realization; d) personal characteristics – reveals some characterological features of the employee.

Issue 1(55) 2022

<http://naukaipravohorona.com/>

The latent-structural statements of the original SRI version allowed to single out those that clearly belong to certain scales, 134 statements were selected from the latter, which were the most understandable to Ukrainian-speaking respondents and equally reflected all scales of the SRI-U questionnaire. The article also presents the average test norms, as well as the main psychometric characteristics of the adapted SRI-U – criterion and constructive validity, reliability (retest and parallel forms), internal consistency of scales, etc.). It is shown that according to the results of SRI-U psychologist can determine to which personality type the respondent belongs: high and medium indices on the scales of the wall type of response and low on the scales of the hypotensive register allow to classify a person to alpha or gamma type; low values – on the wall scales and high values – on the hypotensive – indicate that a person belongs to the beta or delta types. It is noted that most police officers showed alpha – (55–65 %) and gamma – (16–18 %) personality types that are productive for law enforcement and are characterized by extroversion, activity, leadership trends, energy and more. The results of the study proved the diagnostic verification of this questionnaire and the feasibility of its use in the process of psychological support of work with staff of the Ministry of Internal Affairs of Ukraine.

Keywords: California psychological questionnaire, Ukrainian-language adaptation, psychometric characteristics, reliability, validity, averages, internal consistency.
