RESULTS OF THE STANDARDIZATION OF ADAPTED FOREIGN PSYCHODIAGNOSTIC QUESTIONNAIRES

The article is devoted to the coverage of the results of an experimental research devoted to the psychological standardization of some psychological diagnostic techniques of individual characteristics of the employees of the National Police of Ukraine, in particular the California Psychological Questionnaire and the Belbin Group Roles Questionnaire, adapted in the Ukrainian language. The results of testing of a representative sample of police officers (criminal investigation officers, police patrol officers; pre-trial investigation agencies; district police officers) are presented. Estimates obtained in the process of psychodiagnostic testing were analyzed using statistical methods using Microsoft Excel and SPSS Statistics programs, which allowed the study of the main individual-personal characteristics of the employees of the National Police of Ukraine. The mentioned psychological peculiarities determine the level of a person's professional fitness for work according to the criteria of personal characteristics and peculiarities of interpersonal interaction. The article presents average normative indicators for a sample of police officers (women and men), as well as the results of comparison with the basic data for each questionnaire. According to the results of this study we found, that the adapted Ukrainian-language psychodiagnostic questionnaires represent a powerful psychodiagnostic tool for working with law enforcement personnel. The data obtained meet the established requirements for psychodiagnostic tools and testify to the possibility of using the adapted techniques in psychodiagnostic work of psychologists of the Ministry of Internal Affairs. Thus, the practical psychologists of the National Police have additional possibilities to improve the psychological support of the personnel.

Keywords: National Police of Ukraine, individual characteristics, psychological diagnosis, professional suitability, psychodiagnostic questionnaires.
